I started on the frontend, took on the backend, and now ship LLM features in production. Ten years in, the stack has changed more than once; what carries over is understanding how the whole system fits together. Most of what I ship is infrastructure other teams build on: low-code platforms, back-office systems, document management, e-commerce. I own architecture and performance on large codebases, and run the code review that keeps them maintainable. React, Next.js and TypeScript on the front, Node.js and PostgreSQL behind it.

KEY ACHIEVEMENTS

- Designed a DSL for a low-code reporting platform, so analysts write formulas themselves instead of filing tickets.
Wrote the grammar, the editor and the evaluator: a parser built with Chevrotain and Lezer, wired into a CodeMirror editor with completion and inline errors.
- Worked directly with clients in the EU and the US: from deciding what to build, through the trade-offs, to what shipped.
Small teams, so I was responsible for the frontend, the backend, the release and more.
- Built premium subscriptions for a PWA that also runs in native apps: a paywall plus store purchases and restores.
Purchases go through a native bridge to the store, while premium banners and promo-code and referral rewards live in the web app.
- Took LLM features from prototype to production.
Built retrieval over the product's own documents, streaming responses, tool calling and agent-style flows. All of it runs through OpenRouter rather than one vendor.
- Kept large tables and charts responsive on codebases too large for one engineer to keep in their head.
Virtualized the big tables, split and lazy-loaded the routes, trimmed the bundle, and cut repeat GraphQL round trips with fragment-level caching.
- Set up the code review process and mentored the developers who joined later.
Wrote the specs the code was built from, and the shared rules and prompts the team used with AI coding tools.

SKILLS

FRONTEND React · Next.js · TypeScript · GraphQL · Apollo Client · PWA · JavaScript · HTML5 · CSS3 · SCSS · CSS Modules · styled-components · Ant Design · Storybook · React Router

STATE Redux · Zustand · React Query · React Context · Redux-Saga

BACKEND Node.js · Express · PostgreSQL · NestJS · TypeORM · REST · API design · WebSockets · Redis · Apollo Server · type-graphql · Axios · Nodemailer

AI & LLM LLM APIs · RAG · Prompt Engineering · AI Agents · OpenRouter

TOOLING Docker · AWS (Cloud Essentials) · Jenkins · Git · ESLint · GitHub Actions · Webpack · Vite · Prettier · Jest · Vitest · React Testing Library · Enzyme · Figma · Jira · Scrum

LIBRARIES CodeMirror 6 · Lezer · Chevrotain · Lexical · Chart.js · react-dnd · react-window · D3.js · Lodash · Dexie · Puppeteer

EXPERIENCE

2015 - 2026

03/2025 - 07/2026

Full Stack Developer - BechaCant, remote (US)

PROJECT A social app built around challenges between users: a Next.js PWA with LLM features that also runs inside the iOS and Android apps.

RESULT Built the client side of the premium subscription and put the product's first LLM features into production.

TECHNICAL CHALLENGES

- RAG without a vector database: for a small set of product documents, keyword search was enough, the same grep-style approach coding agents use.
- A PWA inside the iOS and Android apps: push notifications, local data in IndexedDB through Dexie, and store purchases through a native bridge, built with the team.

SCOPE

- The whole frontend of the PWA: challenges, a feed, push notifications, profiles and a rewards wallet.
- An AI assistant panel: streamed answers, model choice, tool calling and undoable AI edits. Wrote the spec before the code.

STACK

TypeScript · React · Next.js · PWA · Node.js · REST · LLM APIs · Redux

01/2021 - 11/2024

Full Stack Developer - eTeam, remote

PROJECT nedyx - a low-code platform for business reporting, built by a small international team.

RESULT Shipped the widget system, undo/redo, archives and PDF export that the platform's reporting runs on, plus the platform's own functional language for formulas.

TECHNICAL CHALLENGES

- Undo/redo for the whole app, written in-house for performance: widget moves, formulas, styles and other changes share one history, a change across several pages undoes as one step, and the history is kept in IndexedDB so it survives a reload.
- Formula editor for analysts rather than developers: references to widgets and cells are highlighted and autocompleted from page and widget names, errors show as you type and after server validation, and clicking a reference selects the widget on the page.
- User-built pages of tables, charts and text on data from SSAS, OData, Google Sheets and external databases: custom drag-and-resize, alignment guides and Puppeteer PDF export work for any set of widgets.

SCOPE

- Maintained and extended the product in React, TypeScript, Node.js, GraphQL and Apollo. Built a dynamic widget system with full visualization control, large tables, charts and a text editor, reading data from external databases for many users.

STACK

React · TypeScript · GraphQL · Apollo Client · Node.js · TypeORM · type-graphql · PostgreSQL · styled-components · Apollo Server · CodeMirror 6 · Chevrotain

09/2018 - 01/2021

Frontend Developer - U-Genius, remote (Ukraine / US) · React · TypeScript · GraphQL · Apollo Server

EARLIER ROLES

Frontend Developer - Adraba, Kyiv · 01/2018 - 07/2018

Web Software Developer - Software MacKiev, Kyiv · 09/2016 - 01/2018

Freelance Frontend Developer · 04/2015 - 10/2016

EDUCATION

09/2025 - expected 09/2027 **MSc in Computer Science, AI & Machine Learning**

Neoversity IT University

Machine learning, neural networks, statistics and algorithms.

Machine learning · Neural networks · Algorithms & data structures · Python for data · Statistics · Research methods

2012 - 2016 **Postgraduate studies, Environmental Safety**

National Academy of Sciences of Ukraine

Ran in parallel with research work at the Academy: pollution monitoring, data validation and published papers.

Research design · Data quality & validation · Technical writing · ArcMap / GIS
