I started on the frontend, took on the backend, and now ship LLM features in production. Ten years in, the stack has changed more than once; what carries over is understanding how the whole system fits together. Most of what I ship is infrastructure other teams build on: low-code platforms, back-office systems, document management, e-commerce. I own architecture and performance on large codebases, and run the code review that keeps them maintainable. React, Next.js and TypeScript on the front, Node.js and PostgreSQL behind it.

KEY ACHIEVEMENTS

- Designed a DSL for a low-code reporting platform, so analysts write formulas themselves instead of filing tickets.
- Worked directly with clients in the EU and the US: from deciding what to build, through the trade-offs, to what shipped.
- Built premium subscriptions for a PWA that also runs in native apps: a paywall plus store purchases and restores.
- Took LLM features from prototype to production.
- Kept large tables and charts responsive on codebases too large for one engineer to keep in their head.
- Set up the code review process and mentored the developers who joined later.

SKILLS

Frontend React · Next.js · TypeScript · GraphQL · Apollo Client · PWA · JavaScript · HTML5 · CSS3 · SCSS · CSS Modules · styled-components · Ant Design · Storybook · React Router

State Redux · Zustand · React Query · React Context · Redux-Saga

Backend Node.js · Express · PostgreSQL · NestJS · TypeORM · REST · API design · WebSockets · Redis · Apollo Server · type-graphql · Axios · Nodemailer

AI & LLM LLM APIs · RAG · Prompt Engineering · AI Agents · OpenRouter

Tooling Docker · AWS (Cloud Essentials) · Jenkins · Git · ESLint · GitHub Actions · Webpack · Vite · Prettier · Jest · Vitest · React Testing Library · Enzyme · Figma · Jira · Scrum

Libraries CodeMirror · Lezer · Chevrotain · Lexical · Chart.js · react-dnd · react-window · D3.js · Lodash · Dexie · Puppeteer

03/2025 - 07/2026

Full Stack Developer - BechaCant, remote (US)

PROJECT A social app built around challenges between users: a Next.js PWA with LLM features that also runs inside the iOS and Android apps.

RESULT Built the client side of the premium subscription and put the product's first LLM features into production.

TECHNICAL CHALLENGES

- Three challenge types with separate screens and statuses: every notification, shared link and expiring timer has to land on the right type and state, and the server's deadlines decide that state.
- In-app purchases: the monthly subscription and restoring purchases go through a native bridge to the store, and every outcome (success, failure, cancellation, nothing to restore) maps to one status for the UI.
- Keeping the model from inventing features: its context is built from the product's function list and docs, and the build fails as soon as the two drift apart.

RESPONSIBILITIES

- Product features in the PWA: one-on-one and one-against-many challenges with voting, a feed of posts and comments, push notifications, profiles and followers, an onboarding tutorial and a wallet with promo-code and referral rewards.
- Mobile fixes: layouts that hold under Android's large font sizes, modal inputs kept clear of the on-screen keyboard, and shared links that open in the app instead of the browser.
- Assistant panel: streamed answers and a choice of model and reasoning effort, tool calling and agent-style flows, and every AI edit undoable as one step. Wrote the spec before the code and kept both in sync.

STACK

TypeScript · React · Next.js · PWA · Node.js · REST

01/2021 - 11/2024

Full Stack Developer - eTeam, contract, remote

PROJECT nedyx - a low-code platform for business reporting, built by a small international team.

RESULT Shipped the widget system, undo/redo, archives and PDF export that the platform's reporting runs on, plus the platform's own functional language for formulas.

TECHNICAL CHALLENGES

- Undo/redo for the whole app: widget moves, formulas, styles and other changes share one history, a change across several pages undoes as one step, and the history is kept in IndexedDB so it survives a reload.
- Formula editor: references to widgets and cells are highlighted and autocompleted from page and widget names, errors show as you type and after server validation, and clicking a reference selects the widget on the page.
- User-built pages: users configure tables, charts and text blocks from database data, and layout, alignment guides and PDF export work for any set of widgets.

RESPONSIBILITIES

- Maintained and extended the product in React, TypeScript, Node.js, GraphQL and Apollo. Built a dynamic widget system with full visualization control, large tables, charts and a text editor, reading data from external databases for many users.

STACK

React · TypeScript · GraphQL · Apollo Client · Node.js · TypeORM · type-graphql · PostgreSQL · styled-components

09/2018 - 01/2021

Frontend Developer - U-Genius, contract, remote (Ukraine / US)

React · TypeScript · GraphQL · Apollo Server

EARLIER ROLES

Frontend Developer - Adraba, contract, Kyiv · 01/2018 - 07/2018

Web Software Developer - Software MacKiev, contract, Kyiv · 09/2016 - 01/2018

Freelance Frontend Developer · 04/2015 - 10/2016

Full work history on LinkedIn: [linkedin.com/in/oleksa-t-90a050a8](https://www.linkedin.com/in/oleksa-t-90a050a8)

EDUCATION

09/2025 - 09/2027 **MSc in Computer Science, AI & Machine Learning**

Neoversity IT University

Machine learning, neural networks, statistics and algorithms.

Machine learning · Neural networks · Algorithms & data structures · Python for data · Statistics · Research methods

2012 - 2016 **Postgraduate studies, Environmental Safety**

National Academy of Sciences of Ukraine

Ran in parallel with research work at the Academy: pollution monitoring, data validation and published papers.

Research design · Data quality & validation · Technical writing · ArcMap / GIS

2011 - 2012 **Master's degree, Project Management**

National University "Kyiv Aviation Institute"

Took part in student conferences.

Project management · Planning & estimation · Risk management · Global sourcing · Stakeholder communication

2007 - 2011 **Bachelor's degree, Hydrometeorology**

Taras Shevchenko National University of Kyiv

Physics, statistics and modeling of complex systems. Played chess for the university team.

Data analysis · Statistical modeling · Scientific method · GIS · Large datasets · Self-directed learning
